2	1	6%
3	2	11%
4	3	17%
5	12	67%

Additional comments about the Summit wikispace and registration

Very well organized and clear.

test

Thank you for letting me know when a spot opened up!

Well done with all the information that was needed - place, time, program, etc

easy to navigate on the web, didn't print so well, though.

It would have helped to get an email the day before to remind me about the location, etc.

perfectly organized

Easy and very clear

The venue and set up for the Summit (location, food, AV etc.) was appropriate and comfortable.

Additional comments about venue and set up

test

Nice space, good wifi, nice display screens, tables encouraged cross-discussion.

We were told to have laptops. I think we should have been told to not bring laptops.

People would have just concentrated on the presentations more. I include myself in the laptop distraction group.

It was a bit crowded - a bit challenging to have conversations.

room was a good size for delivering presentations but as a conference space it seemed undersized for the gathering and catering area was congested.

Food and drink were great, and appreciated good vegetarian options

Could have used more room. A bit squished.

The format of the Summit was useful and productive

1	0	0%
2	0	0%
3	3	17%
4	4	22%
5	11	61%

Additional comments about the format of the Summit

I was only there for the morning, but I appreciated how the presentations built upon each other. As a presenter, the use of Google Drive for the presentations was very handy, but it does mess with formatting, which can detract from one's flow.

test

Timing of the talks was well done, moved along quickly.

great balance between presentations/breaks

The talks were great, but there wasn't enough time for questions.

It is great to get together with colleagues not only hear about great projects and advances but to talk with peers on such issues.

The topics and content of the Summit were useful and relevant

1	0	0%
2	2	11%
3	1	6%
4	4	22%
5	11	61%

Additional comments about the content of the Summit

test

So good to see people sharing ideas, tools, methodologies and problem solving together.

Very helpful.

I would have liked a more technically focused summit, or maybe two streams?

I would have liked to have heard about what is being done at other universities. York

is way ahead as is UTSC.

-it would be useful to have some pre-Summit homework or a testbed/sandbox to play in with all the software. -maybe this is the next step? Community sets up a testbed where we all can play around with some test data prior to meeting. It could also be more inclusive to those who cannot travel to TO.

It is great to see tools in action.

The topics were useful. I was definitely interested in hearing more about Islandora and Omecka. However, the talk on Islandora contained far too little information about how Islandora looks and works in action, and far too much content about the people involved in the project - especially at an hour and fifteen minutes.

Which part of the Summit was most useful or enjoyable?

test

Networking, hearing about others practice.

I think the theoretical and practical elements were really well balanced.

Practical Implementation of Digital Preservation Policies Also - Archivematica

Many of the talks were very informative. Opportunity to network with people from other institutions.

I actually really liked the layout of the Summit, with the policy and project planning sections happening in the morning and the show and tell happening in the afternoon

Overview of cases in presentations.

Absolutely.

The opening talk on policy. Discussions of specific software - the more focused presentations

All of them

The platform specific talks (Islandora, Omeka, Archivematica) and York's reusable policy documents.

I appreciated a good overview of several solutions and how they can work together -- it was a good selection of topics

the presentation on policy formation (the first presentation of the day) by Nick Ruest was particularly useful - so glad that York is willing to share the hard work that they have done.

I like the morning session best as it was easier to relate to. The afternoon was good too as I didn't know the 3 softwares that were talked about in detail.

Omecka talk. Definitely interested in looking at this further back home.

What topics would you like the Digital Curation Community to address in the future?

test

Archival appraisal of born digital records
Privacy/security policies and control for restricted records

Scholars Portal Cloud

More tools. And collaborative projects between universities.

More hands on demonstrations, more granular examination of individual tools (Omeka, ATOM etc.) Thanks!

-large scale, collaborative project development/grant funding etc.

Perhaps a more hands-on component where participants could actually work with some of the tools. I believe it would really help the learning process.

Examples used at other universities.

Integration. UofT's talk about using Islandora and Omeka together was great. I'd like to see more. Especially regarding OLRC.

We need to look seriously at solutions for Library and Archives for the growing range of digital initiatives that we need to support. This was a good overview and now we will need to figure out more in-depth how the solutions can help us and how to put them together in a manageable way, and any possibilities of shared initiatives (OCUL or multi-institution) -- so like a second step to build more "how to"
