

TRAC2 4.4.2.1

4.4.2.1 - The repository shall have procedures for all actions taken on AIPs.

Introduction

SP has consistent procedures for allowable actions taken upon its AIPs, as specified in the [Preservation Implementation Plan](#). SP AIPs can be replaced or reloaded at the request of the Provider, and their identifiers adjusted accordingly. AIPs are not deleted as a part of normal operations. Please see the [TDR Script Diagram](#) for detailed documentation of procedures occurring during ingest, as well as the [URI & File Naming Plan](#) for a description identifier adjustment.

If there are any problems during these procedures, an error message is sent to the loaders.

Responsibility

Digital Preservation Policy Librarian
