

Introducing the Data Curation Tool

The Scholars Portal Dataverse team has been hard at work on the new Dataverse Data Curation Tool as part of [our Canarie RDM grant project](#). Development on this project is being led by Victoria Lubitch, Programmer/Analyst at Scholars Portal.

The Data Curation Tool (DCT) allows data owners and curators to create and edit variable-level metadata for any tabular file in a dataset. Users can access this tool as a modular application once they've uploaded a [tabular file](#) (e.g., SPSS, R, Excel, CSV) to a dataset in Dataverse.

<input type="checkbox"/>	ID	Name	Label	Weight	View	
<input type="checkbox"/>	v134374	Q1A	1a. If a federal election were held today, which party are you most likely to vote for?			
<input type="checkbox"/>	v134345	Q1B	1b. Even though you may not have made up your mind, which party are you leaning towards at this time?			
<input type="checkbox"/>	v134615	Q2	2. Do you approve or disapprove of the job Stephen Harper is doing as Prime Minister?			
<input type="checkbox"/>	v134478	Q3	3. Do you approve or disapprove of the job Tom Mulcair is doing as Leader of the Opposition?			
<input type="checkbox"/>	v134600	Q4	4. Do you approve or disapprove of the job Justin Trudeau is doing as leader of the Liberal Party?			

The Data Curation Tool

Similar to tools like SPSS, the DCT allows users to view summary statistics about their data, add variable information like 'Interviewer Instructions' or 'Notes', create variable groups, and indicate weighting variables.

Q1A: 1a. If a federal election were held today, which party are you most likely to vote for?

Values	Categories	Count	Count Percentage(%)	Weighted Count
1	Conservative	491	28.202	
2	Liberal	523	30.04	
3	New Democratic	292	16.772	
4	Green	103	5.916	
5	Bloc Quebecois	61	3.504	
6	Other Parties	59	3.389	
7	Undecided	212	12.177

Variable editor in the DCT

Once edits have been completed and saved back to Dataverse, these changes can then be downloaded as an XML file or exported to a codebook.

Variable Description

Variable Groups

- [Number of hours](#)

Number of hours

Variables within Number of hours

- [Weeks absent from work](#)
- [Usual hours per week at main job](#)
- [Actual hours per week at main job](#)
- [Usual hours per week at all jobs](#)
- [Actual hours per week at all jobs](#)
- [Hours away from work, employees, part-week only](#)
- [Paid overtime hours in ref. week](#)
- [Unpaid overtime hours in ref. week](#)
- [Number of overtime or extra hours worked](#)
- [Usual hourly wages, employees only](#)

Variables

Example of a codebook in Dataverse

Usability testing sessions were recently completed with 5 participants, who worked through a series of tasks and helped us identify areas where the user experience could be improved in the tool. We're now working on translating this tool to be used in French, with translations provided by the University of Ottawa.

A [demo of this tool is available online](#), and [the code can be accessed on GitHub](#). The Data Curation Tool will be launched with the next Scholars Portal Dataverse upgrade, currently scheduled for the end of October, and will be available for community testing soon.
