

TRAC2 4.2.4.1.4

4.2.4.1.4 - The repository shall be able to provide a complete list of all such identifiers and do spot checks for duplications.

Introduction

SP can provide a complete list of all identifiers upon request. Spot checks are not necessary because the automatic identifier generation process does not allow duplication. Please see [4.2.4.1](#) and [4.2.4.1.1](#) for more information about the creation of unique identifiers.

Responsibility

Digital Preservation Policy Librarian
