

TRAC2 4.2.6.2

4.2.6.2 - The repository shall execute its documented processes for acquiring PDI.

Introduction

SP acquires and formats PDI automatically during ingest. For more information on the procedures used to generate or gather this metadata, see [Workflow Charts](#).

SP runs each file through the FITS software package. The output created by FITS is then run through a style sheet that formats the file information into PREMIS.

Responsibility

Digital Preservation Policy Librarian
