

# TRAC2 4.2.5.4

## **4.2.5.4 - The repository shall have tools or methods to ensure that the requisite Representation Information is persistently associated with the relevant Data Objects.**

### **Introduction**

Representation information for each file is defined through SP's use of the FITS software package. This Representation Information is stored in the SP AIP Preservation Metadata. The Preservation Metadata also contains references to the location of the data object stored in a filesystem on disk.

### **Responsibility**

*Digital Preservation Policy Librarian*

### **Relevant Documents**
