TRAC2 4.4.2

4.4.2 - The repository shall have contemporaneous records of actions and administration processes that are relevant to storage and preservation of the AIPs.

Introduction

SP automatically captures events that occur throughout the object's life within the repository. The repository uses PREMIS event vocabulary to record ingest, file replacement or reload, and transformation of the file in the preservation metadata of each AIP. The preservation metadata also records the storage location of each file comprising the AIP.

Responsibility

Digital Preservation Policy Librarian
